

Cloud Architectures & Management

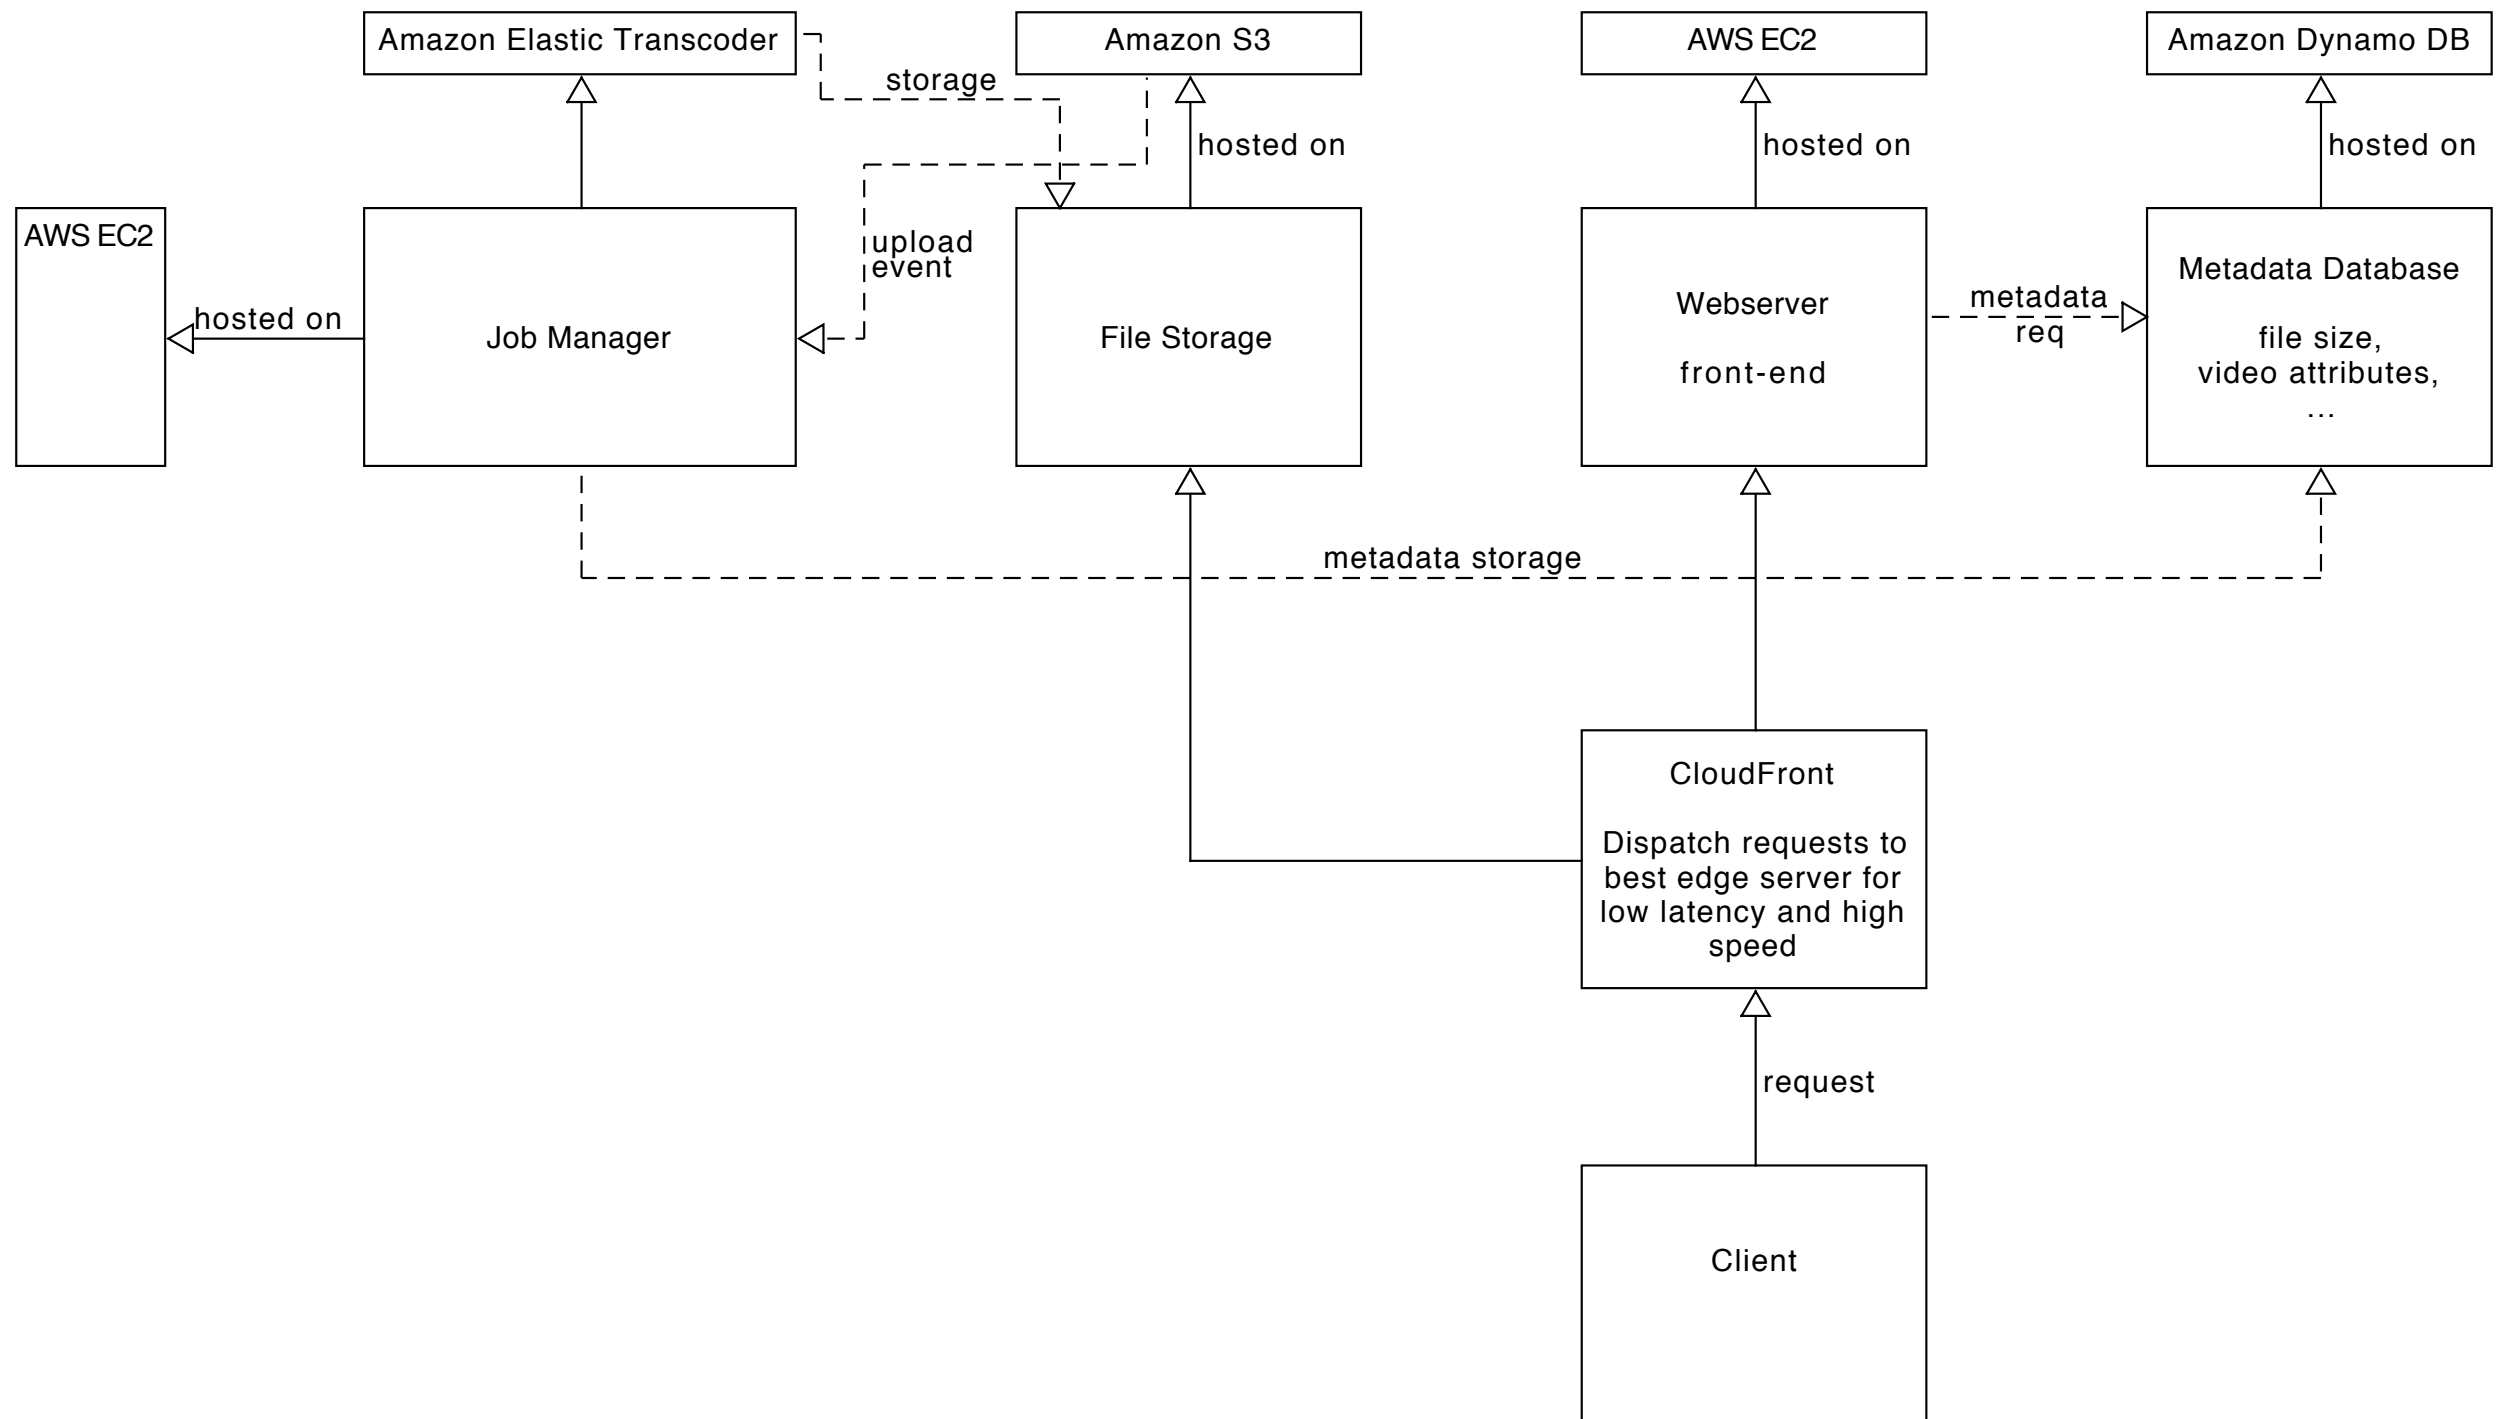

Assignment 1

Felix Ebinger
Thomas Reinhardt
Julian Ziegler

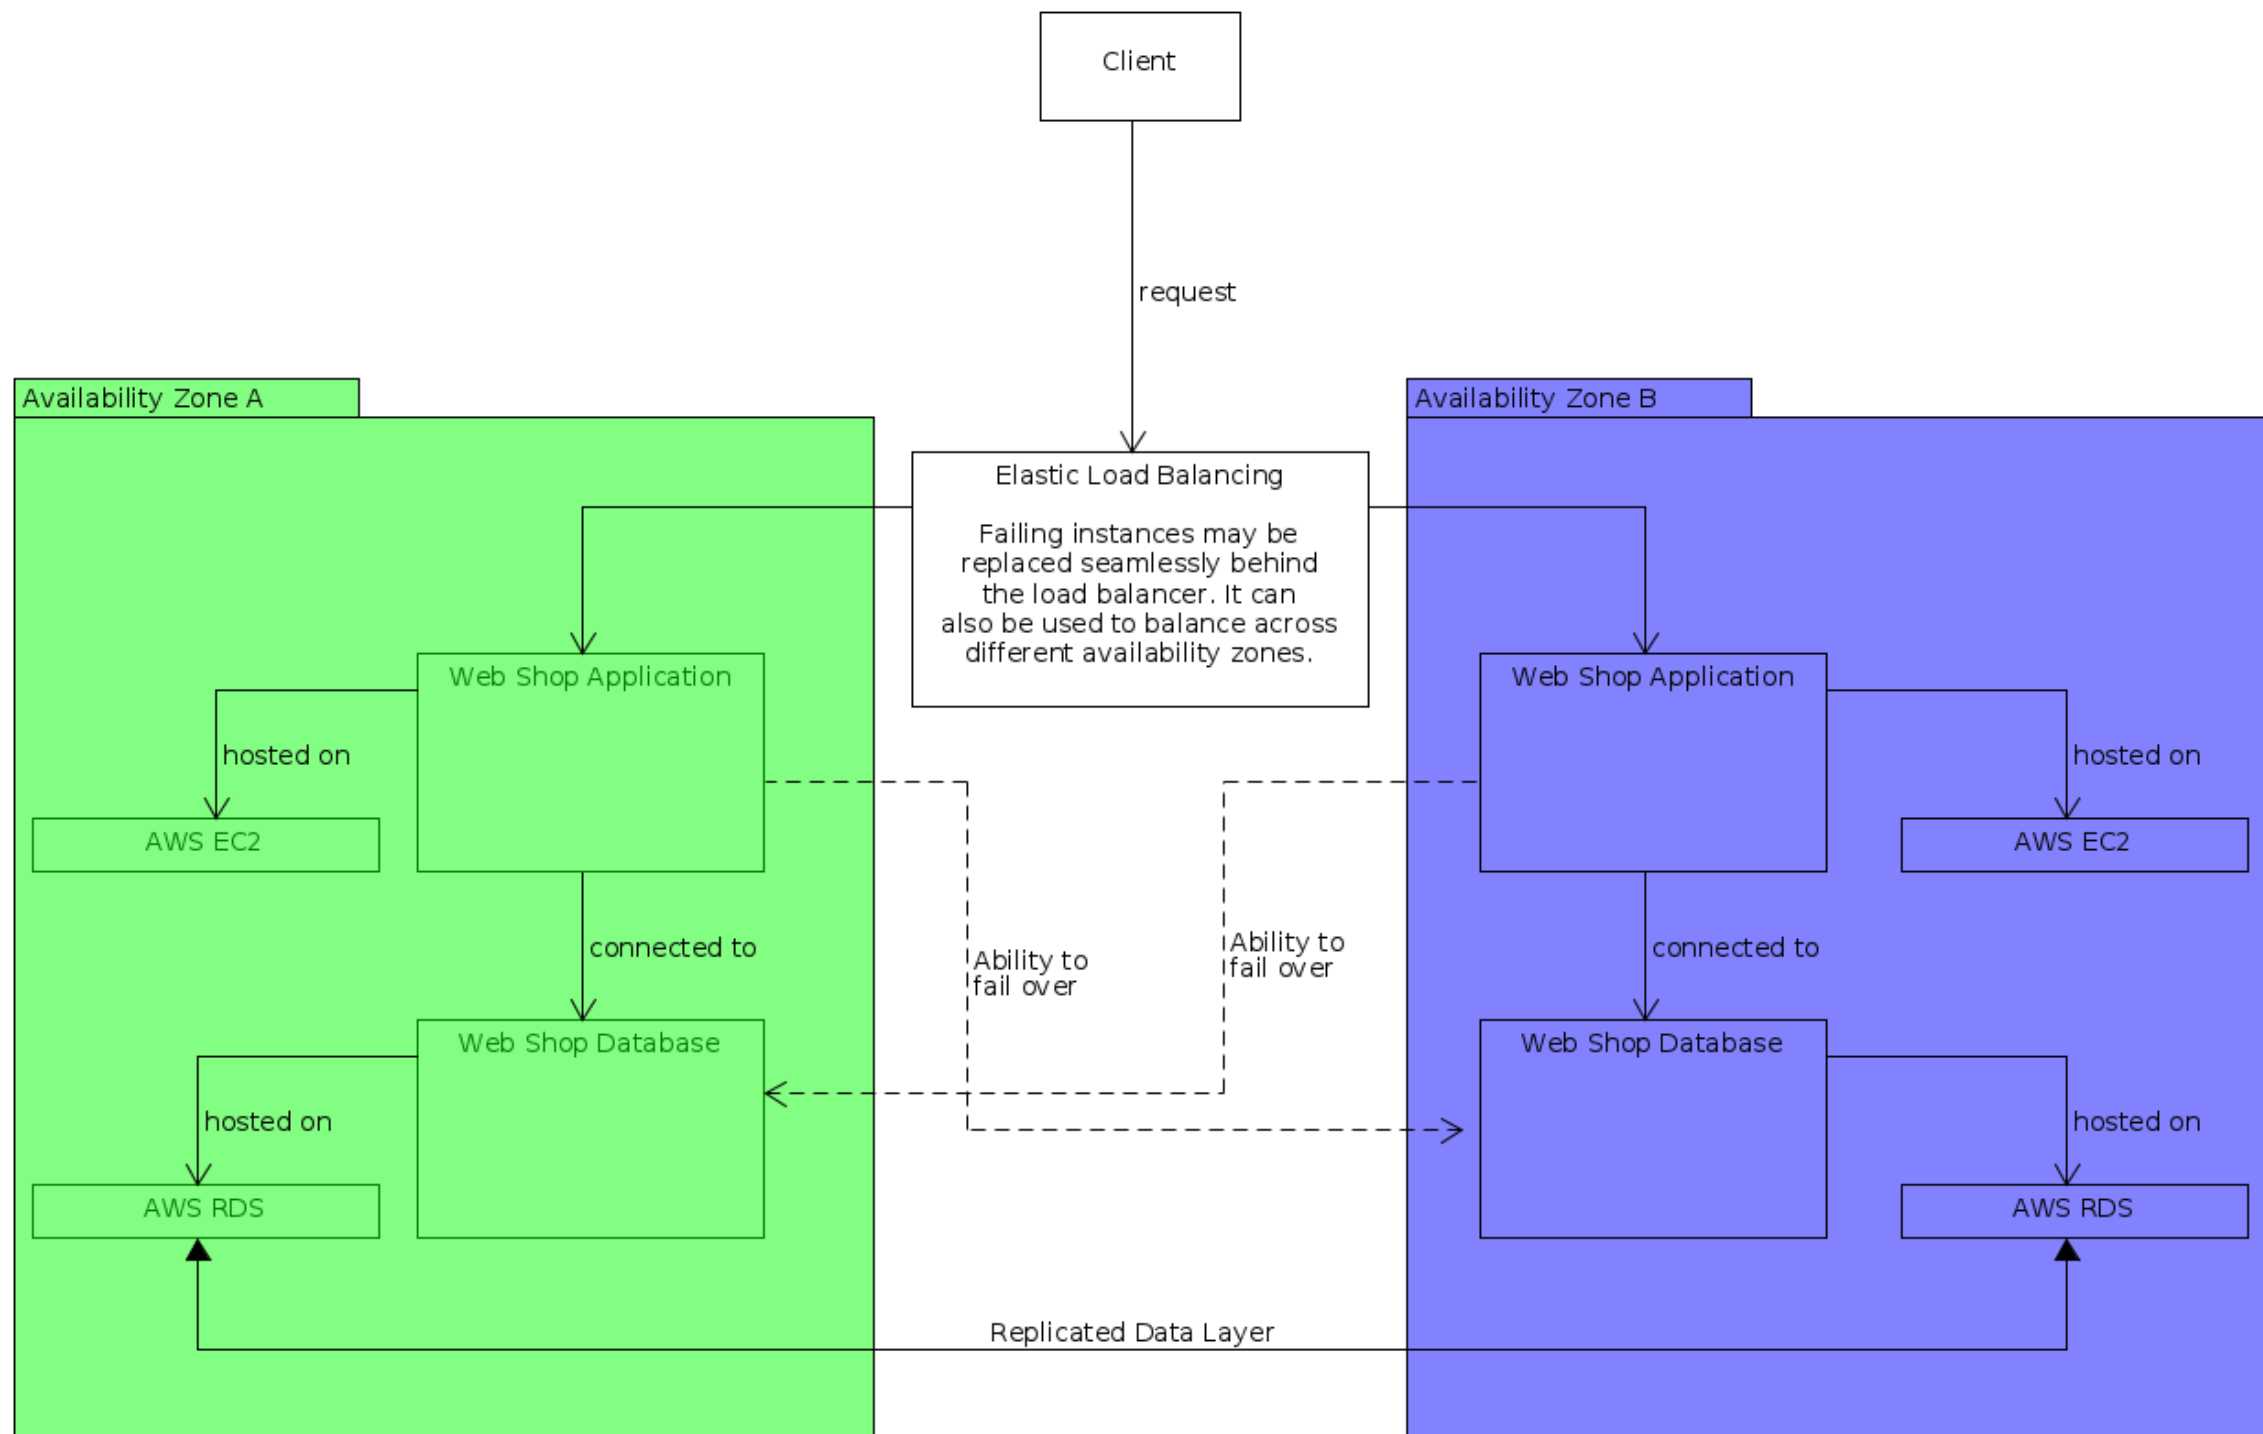

1.2.a Blog as three-tier Web application

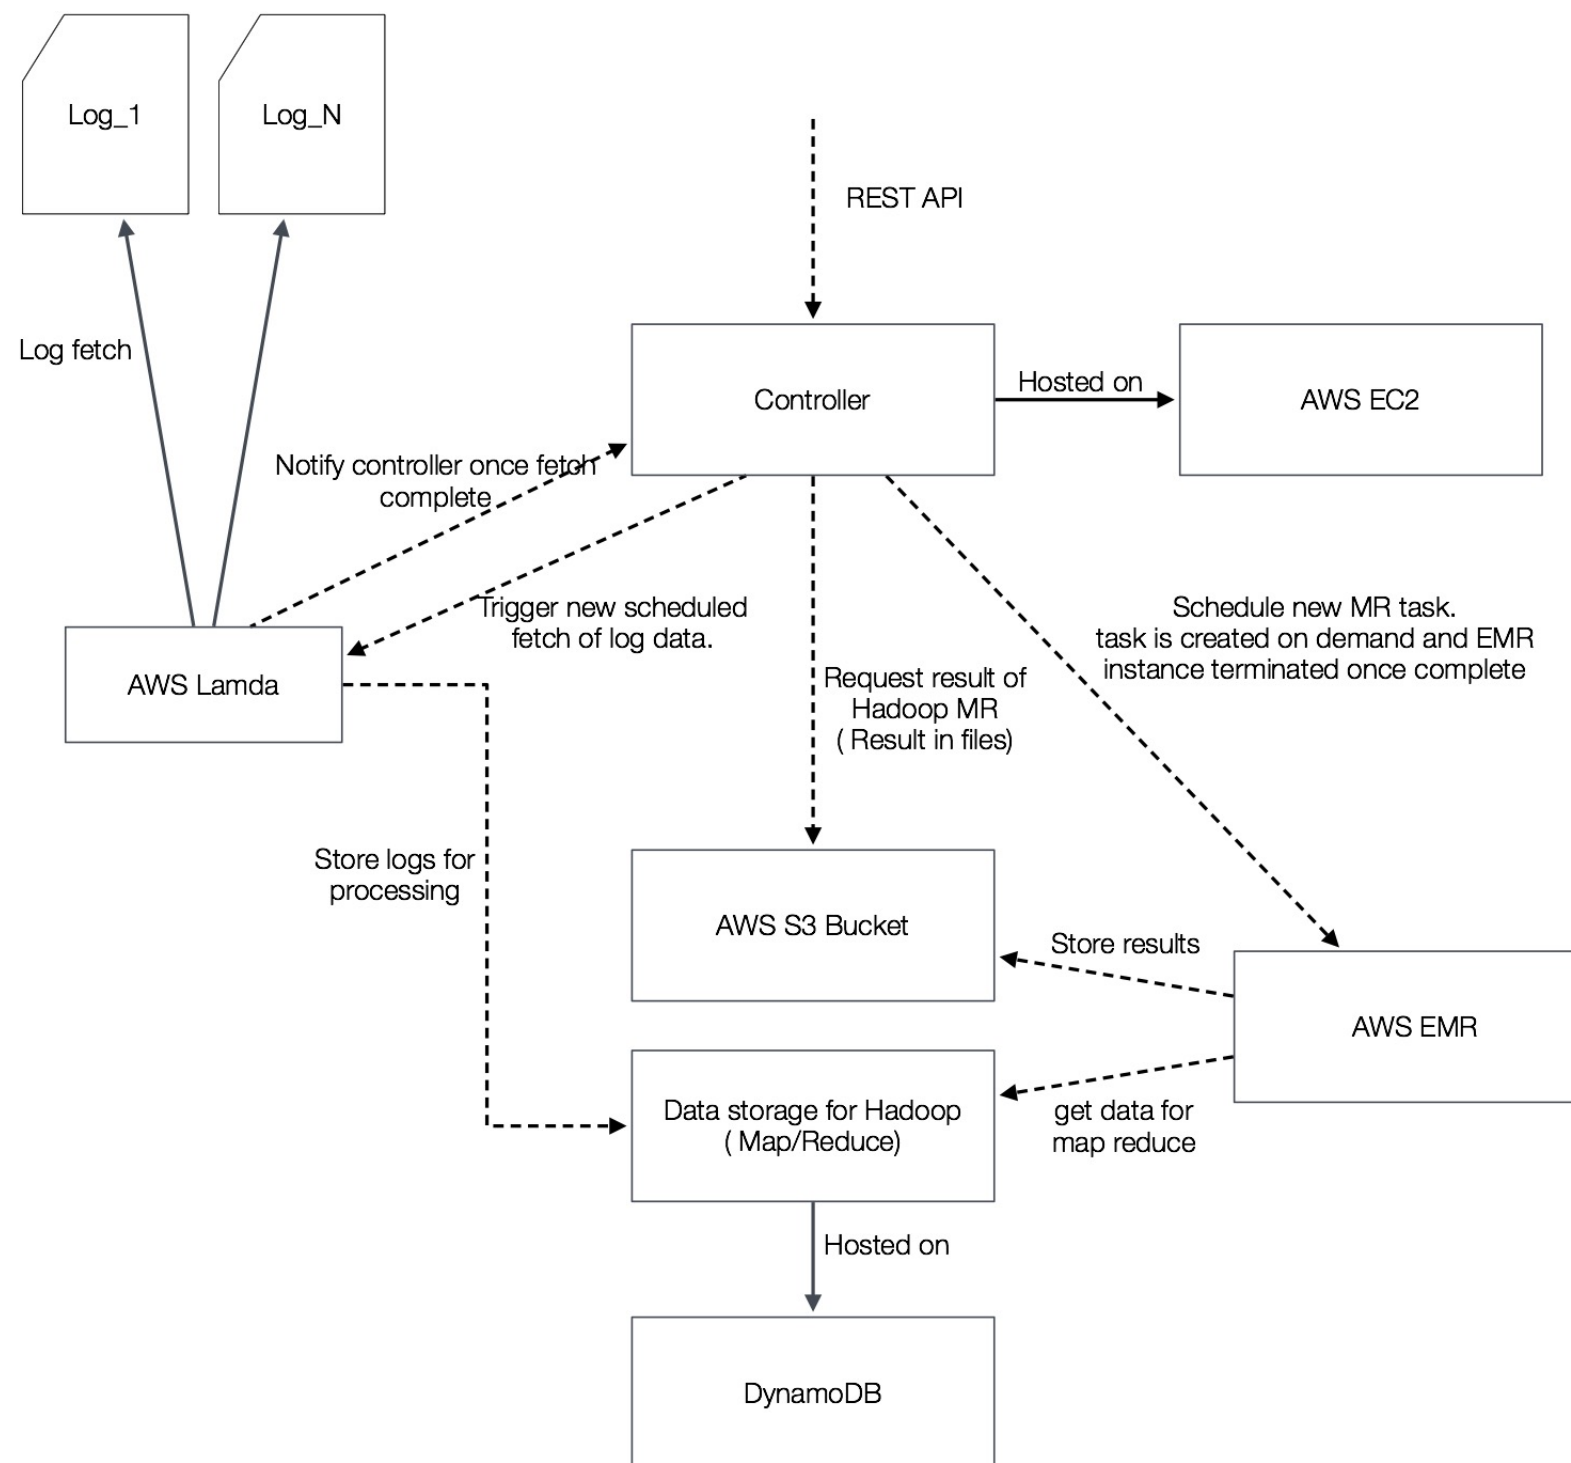

1.2.b Backend for video sharing platform

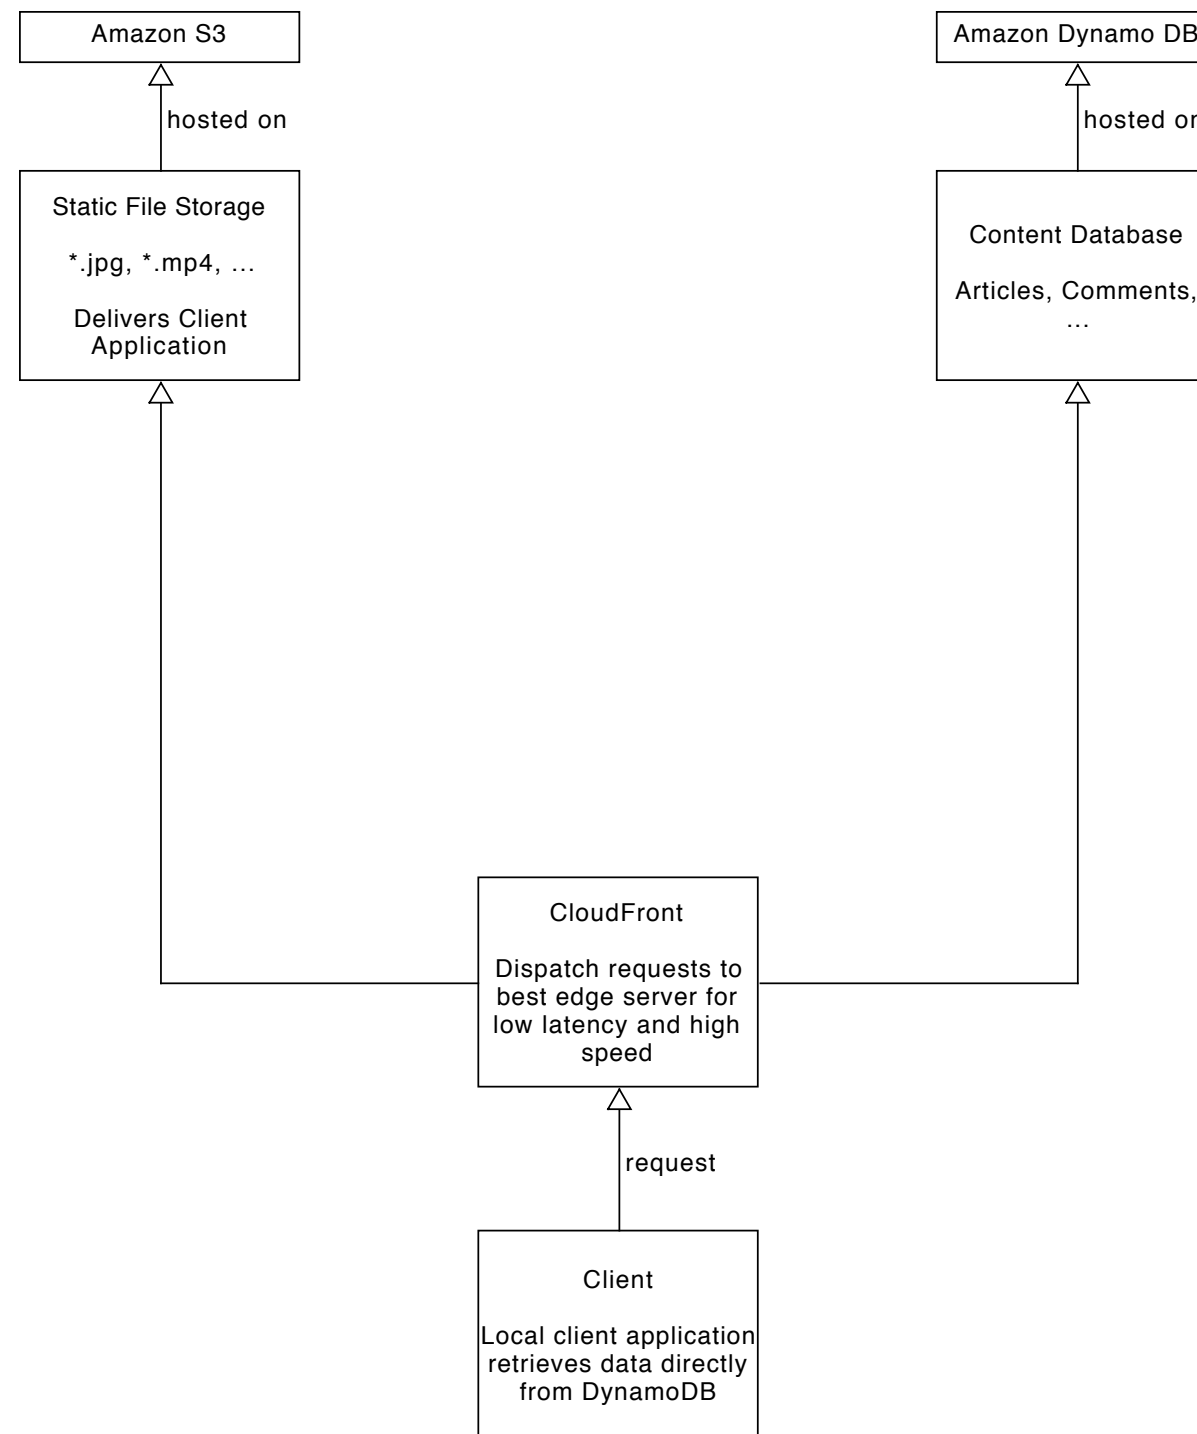

1.2.c Zero-downtime Web shop

1.2.d Log analyzer for a Web application

1.2.e Blog as two-tier Web application

1.4 & 1.5 Deploy WordPress on single EC2 instance

Demo

1.5 Deploy additional WordPress instances on EC2

Discussion

Now you have multiple WordPress instances. However, each instance has a separate address. What would you have to do to put a load balancer in front of the WordPress instances, so that all instances can be accessed using a single address?

➔ Elastic Load Balancing

1.5 Deploy additional WordPress instances on EC2

Discussion

Does it make sense at all to “load-balance” between these WordPress instances? Remember that currently each WordPress instance has its own separate database in the background.

➡ No
